

# Trevor Jones

## Software Developer

(856) 993-1609   devtrev3@gmail.com   [Portfolio](#)   [LinkedIn](#)   [Github](#)   Central Florida

**Skills**   JavaScript, React.js, Redux.js, Sequelize, Express, Python, Flask, SQLAlchemy, HTML5, CSS3, Git, PostgreSQL, SQL

## Projects

**Photo-Genius** (JavaScript, React / Redux, Python, Flask / SQLAlchemy, HTML, CSS, PostgreSQL)   [Live Site](#) | [Github](#)

- Leveraged React-Redux store to preload all images before React renders, reducing overall API load time by 30%.
- Implemented user experience (UX / UI) design to easily navigate through the website allowing for a straightforward experience.
- Streamlined data flow in Flask and Redux to allow for smooth access in React components by normalizing data.
- Delivered a full stack project with intuitive usage of React and SQLAlchemy and organized code for users of the codebase.

**YSTE** (JavaScript, React / Redux, Python, Flask / SQLAlchemy, HTML, CSS, PostgreSQL)   [Live Site](#) | [Github](#)

- Collaborated with three full-stack developers to deliver a React e-commerce website with four full CRUD features within a tight deadline.
- Harmonized workflow in teams of two with multiple group meetings and Git version control to diversify features, allowing for a 20% faster completion time.
- Developed a search algorithm leveraged through Flask and SQLAlchemy queries to allow data to be received from the backend and then displayed results on a separate search page.
- Embraced multiple ideas and encouraged varying viewpoints to create a unified team through strong conflict resolution and shared knowledge and expertise.

**trevBnB** (JavaScript, React / Redux, Sequelize / Express, HTML, CSS, PostgreSQL)   [Live Site](#) | [Github](#)

- Produced Express API with 25+ routes queried through Sequelize to create a surplus of information for user experience.
- Amplified user experience through React conditional rendering allowing users to customize spots and reviews.
- Improved backend nesting of objects through React-Redux store allowing for more consistent normalized data flow.
- Composed a React application that allows users to make changes to data without reloading the page through React hooks, context, and React state.

## Experience

### Amazon

#### *Delivery Driver*

September 2020 - March 2022

- Completed on average 170 stops (350 - 400 packages) daily, then proceeded to rescue other drivers, typically new recruits by taking an additional 15 stops from a rescue's route reducing time constraints on a weekly basis by 10%.
- Performed daily representative vehicle maintenance checks prior to departure to identify concerns or potential issues.
- Drove safely in all types of weather and followed traffic laws to protect the company and customer property.
- Driving ability was measured by a credit score-like grading system, maintained above an 800 score throughout my entire employment.

### Applebee's

#### *Head Cook / Key Manager*

November 2017 - August 2020

- Led daily kitchen operations through extensive team-building, skill development, and routine oversight to further a commitment to quality food and customer experience.
- Prepared meal ingredients for lunch and dining services, then proceeded to cook tickets/orders averaging \$30,000 - \$45,000 in sales a week.

## Education

### App Academy

April 2022 - December 2022

Immersive software development course with a focus on full-stack web development.

### Camden County Community College

September 2016 - May 2017

*Coursework in Audio Production*
